

SOLREVIEW

FEATURES

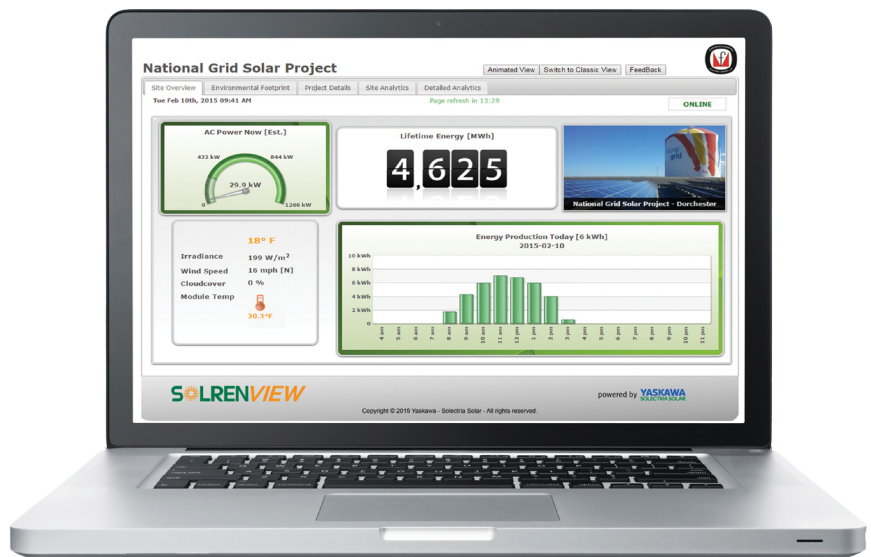

- Inverter direct & revenue grade monitoring
- Performance charting
- Real-time status notifications
- Detailed system data
- Reliable, safe & secure data storage
- SunSpec compatible

OPTIONS

- Site privacy
- XML Feed
- Sub-array monitoring (SolZone)
- Weather station
- Automated agency reporting

WEB-BASED MONITORING

SolrenView™ monitoring provides PV system owners a highly accurate and real time web-based monitoring solution to maximize efficiency and profitability of their solar assets. Yaskawa - Solectria Solar's SolrenView web-based monitoring solution is available for use with residential, commercial and utility-scale inverters, allowing for real-time, seamless recording and reporting of PV system production. The SolrenView data logger comes standard and fully-integrated within all commercial and utility-scale inverters. A standalone SolrenView system features inverter direct monitoring, revenue grade monitoring, agency reporting, SolZone™ sub-array current monitoring, XML feed, kiosk view and weather station monitoring.

SolrenView™ Inverter Direct

STANDARD MONITORING PACKAGE

SolrenView Inverter Direct monitoring allows customers to see detailed operational inverter data (DC and AC) using a web enabled device. This standard package allows customers to view daily, weekly, monthly, and annual graphs up to 5 years into the past, viewing single events or long-term performance trends. The package includes e-mail and cell phone alerts with detailed descriptions of system issues and a recommended course of action.

SolrenView Revenue Grade Energy Production

OPTIONAL MONITORING PACKAGE

SolrenView Revenue Grade Energy Production Monitoring package option keeps track of lifetime energy produced by a customer's PV system. This package option also includes e-mail and cell phone alerts with detailed descriptions of system problems and a recommended course of action. Compatible with third-party inverters.

SolrenView Agency Reporting

OPTION

SolrenView Agency Reporting is for customers that require a revenue grade energy production report to be sent to an agency such as NEPOOL, WREGIS, MassCEC, PG&E, SCE, CCSE, IID, or PaCE. A report is generated from SolrenView Revenue Grade metering outputs and sent directly to the agency of choice. Yaskawa - Solectria Solar's monitoring team works directly with agencies to activate and maintain solar production credit accounts.

SolrenView Kiosk View (Animated View)

STANDARD WITH ALL SOLREVIEW PACKAGES

The Kiosk View (Animated View) provides customers with a quick and easy access to a customer's PV system performance. This is a great tool for advertising and public viewing. When the "Animated View" button is clicked on the SolrenView screen, SolrenView will continuously loop through the site overview, environmental footprint, project details, site analytics, and if applicable, the detailed analytics page.

SolrenView AIR

OPTION

The SolrenView AIR option permits customers to take advantage of SolrenView web-based monitoring features via a fully-integrated 4G cellular modem when standard internet access is not available at a site. SolrenView AIR may be factory integrated for any inverter 50kW and greater (PVI 50-100KW, SGI 225-500PE, SGI 500XT, SGI 500/750XTM inverters; not available for PVI 3800-7600TL or PVI 14-36TL inverters).

SolrenView SolZone™ DC Current Sub-Array Monitoring

OPTION

SolZone provides an extra level of granularity to see multiple sub-array DC currents. SolZone has the ability to compare individual PV zones against each other based on the number of sub-array fuses or 'zones' built into a Yaskawa - Solectria Solar factory-installed DC subcombiner. Inverter hardware required for SolZone. This package option also includes e-mail and cell phone alerts with detailed descriptions of system problems and a recommended course of action. Compatible with all third-party inverters. SolZone is also compatible with most third-party monitoring systems.

SolrenView XML Feed

OPTION

SolrenView XML feed option provides a reporting framework for customers with a need to display real-time monitoring information about their PV system within their applications/website or using third-party monitoring.

SolrenView Weather Station

OPTION

SolrenView Weather Station is a real-time weather package which allows customers to view accurate readings of crucial environmental information that affect the performance of your PV system. The weather station comes standard with a solar irradiance sensor as well as temperature sensors for ambient and module measurements. Wind speed and wind direction sensors are options that may be added to the weather station. The weather station is a great educational tool and a must-have for PPAs. Complies with RS-485 SunSpec Environmental Sensor System.

Viewable Measurements:

- Solar Irradiance
- Ambient Temperature
- Module Temperature
- Wind Speed and Direction (option)
